

WaterMaker Protection System

Using filters infused with revolutionary MYCELX technology, the WaterMaker Protection System captures all hydrocarbon pollution before it can enter the RO matrix.

Saves costly RO element replacement

Simple, easy and automatic

Prevents oil and gasoline sheen from attacking RO membranes

Quick connect hose for installation

Environmentally friendly

Boat lifts follow boat trend

Just as boat manufacturers have added amenities to their watercraft to make the boating experience easier and thus accessible to a wider range of people, as well as more enjoyable, boat lift manufacturers also have added new features and technologies to improve upon the boat owner's experience.

One major trend over the last 5 years is the introduction of hydraulics, fueled by the aging of the baby boom generation, the increasing cost of boats and a reduction in recreation time.

People want to go boating within seconds, not minutes, and use their boat like their car, according to one lift manufacturer.

As boaters age, they often gravitate toward products that provide enhanced ease of use, less maintenance and increased comfort.

As a result, many boat lifts now come with amenities such as canopies, guide-ons, motor stops and battery powered lights; and remote controls that allow the boat owner to raise or lower their boat from the dock, once a luxury, have become standard.

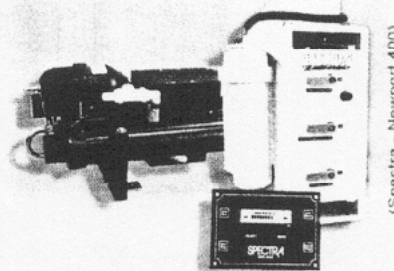

In addition, many boat lifts are being manufactured out of aluminum rather than steel, providing longer life at a higher price; and power systems are migrating to DC for safety reasons, according to lift manufacturers.

Sunstream

Hydraulic boat lifts

Sunstream is one of the major innovators in the boat lift industry and has sparked rapid change in customer expectations for boat lifts. It offers two lines of high-speed, remote-controlled hydraulic lifts.

The FloatLift™ is breakthrough new technology in floating lifts, and has unprecedented speed, reliability and portability.

The SunLift™ sits on the bottom with legs (for regions with little water fluctuation), and has all the structure hidden under the boat.

Hydraulics provide higher reliability along with lightning speeds (30 seconds), which greatly improve both functionality

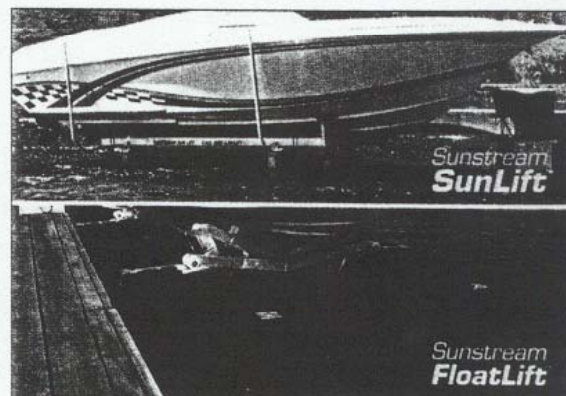

and fun. The system is 12 V, and charged by solar or AC.

All of Sunstream's lifts are built with aluminum construction and premium components. Their specially designed stainless steel hydraulics have proven performance in both fresh and salt water.

The lifts were designed by a former Boeing aircraft engineer, and they operate as smooth and swift as a landing gear.

The FloatLift™ is simply launched like a boat and tied to a dock or attached to a mooring buoy. This opens up the distribution channels to boat dealers, who can sell a lift as a package with their boat.

The floats are constructed like dock

floats (roto-molded plastic with a foam core) so the lift retains its full buoyancy, which makes it stable and level during the full lifting cycle.

Marinas have also welcomed the FloatLift™ since it reduces damage to the dock and increases customer retention.

Sunstream has capacities of lifts from 1,000 pounds to 24,000 pounds.

Experience Innovation

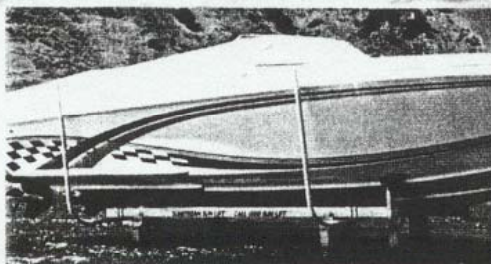

SUNSTREAM
BOAT LIFTS

Sunstream FloatLift™

The Sunstream FloatLift is a breakthrough new concept in boatlifts. FloatLift is the ultra high-speed, hydraulic lift versatile enough to fit in practically any water location - docks, marinas, bulkheads, mooring buoys, and more. It's solar-charged power source allows you to take advantage of locations without AC power.

- Fast hydraulic lifting system
- Durable, foam-filled pontoons
- GravityLock™ locks over-center
- Remote Control Operation

Sunstream SunLift™

The Sunstream SunLift is a high-speed hydraulic lift that is leading the industry in performance and looks. With marine grade, stainless steel hydraulic rams and aluminum frames, the SunLift maximizes reliability and reduces maintenance. Fresh or salt water compatible, capacities from 3,000 to 24,000 lbs.

- Protective rubber-capped aluminum bunk system
- GravityLock™ locks over-center
- Highest quality hydraulic systems
- Remote Control Operation

Sunstream builds premium lifts

Sunstream Corporation™ is revolutionizing the marine industry with the development of superior products that make boating and water sports easier. Our innovative boat, personal watercraft, and floatplane lift technology is delighting our customers by continuously surpassing their expectations.

Become a Sunstream Dealer!

Sunstream lifts are easy to install and operate reliably with no cables or pulleys to break or corrode! Your dealership will provide a high degree of customer satisfaction with Sunstream Boat Lifts!
